

METHOD AND DEVICE FOR SUSPENDING POUCHES

Abstract of the Disclosure

A suspension device for an item comprises a base member and a clamping assembly.

- 5 The clamping assembly is mounted for sliding movement relative to the base member and is adapted to clamp a pouch. A method of suspending such a pouch includes the steps of opening the clamping assembly, placing the pouch in the clamping assembly and simultaneously closing and sliding the clamping assembly into the housing such that the pouch is suspended from the clamping assembly.
